

ISMS SCOPE STATEMENT

CloudNova Technologies

Document Version: 1.0

Approved By: Chief Executive Officer / Executive Management

Date: 2026-07-18

1. ORGANIZATIONAL SCOPE

The ISMS applies to all CloudNova Technologies business functions, departments, employees, contractors, and temporary personnel involved in the design, development, operation, support, administration, security, and governance of CloudNova's information assets and services.

This includes, but is not limited to:

- Executive management and corporate governance
- Information security and IT operations
- Software engineering and product development
- Cloud infrastructure and DevOps
- Customer support and operations
- Sales and customer-facing functions that handle customer information
- Finance and payment-related processes subject to PCI DSS obligations
- Human resources and employee onboarding and offboarding
- Procurement and vendor management
- Legal, compliance, risk, and audit activities

The scope also includes relevant third-party service providers and vendors where their services support or affect the confidentiality, integrity, or availability of information within the ISMS.

2. PHYSICAL SCOPE

The ISMS applies to:

- Corporate and operational facilities used by CloudNova Technologies for business activities.
- Remote working environments used by CloudNova employees and contractors when accessing CloudNova information assets and systems.
- AWS cloud infrastructure and services supporting in-scope CloudNova systems and information.
- Microsoft 365 services used for corporate communication, collaboration, identity, and business operations.
- Third-party facilities and infrastructure where outsourced services process, store, transmit, or otherwise support in-scope CloudNova information.

The physical security of AWS data centers and Microsoft data centers is managed primarily through the relevant providers' shared-responsibility and security controls. CloudNova remains

responsible for the security configuration, access management, data protection, and use of those services within its control.

3. TECHNICAL SCOPE

The ISMS includes the information assets, systems, applications, infrastructure, and technologies used to deliver and support CloudNova Technologies' services and business operations, including:

- AWS cloud infrastructure, services, accounts, workloads, and environments supporting the SaaS platform.
- The customer-facing SaaS platform, including its application, supporting services, databases, APIs, and associated infrastructure.
- Production, development, testing, and staging environments where they process or support in-scope information.
- Microsoft 365 services used for email, collaboration, document management, identity, and business communication.
- Corporate endpoints and devices used to access CloudNova systems and information.
- Identity and access management systems.
- Security monitoring, logging, vulnerability management, and incident response capabilities.
- Source-code repositories, CI/CD pipelines, and software development tools.
- Information systems used to process, store, transmit, or support payment card data and related PCI DSS obligations.
- Backup, disaster recovery, and business continuity systems supporting in-scope services.
- Third-party systems and services that connect to, process information for, or support the operation of in-scope CloudNova systems.

The technical scope includes information in electronic, physical, and other relevant forms where such information supports the organization's in-scope business activities.

4. BUSINESS SCOPE

The ISMS covers the information-security governance and security processes supporting the delivery and operation of CloudNova Technologies' customer-facing SaaS platform and associated business services to global customers.

The scope includes:

- SaaS product development and delivery
- Cloud infrastructure management
- Customer data processing and protection
- Customer account and access management
- Software development and deployment
- Corporate IT and Microsoft 365 operations
- Remote workforce operations
- Information security governance and risk management

- Security incident management
- Business continuity and disaster recovery
- Third-party and supplier security management
- Vulnerability and patch management
- Compliance with applicable contractual, legal, regulatory, and industry requirements, including PCI DSS obligations where applicable

The ISMS is established to protect the confidentiality, integrity, and availability of information supporting CloudNova Technologies' operations, technology environment, customers, employees, and business partners.

5. EXPLICIT EXCLUSIONS AND JUSTIFICATION

5.1 AWS Data Center Physical Security

Exclusion:

Physical security controls for AWS-owned and operated data centers.

Justification:

These controls are managed by AWS as part of the cloud shared-responsibility model. CloudNova remains responsible for the secure configuration and use of AWS services within its control.

5.2 Microsoft Data Center Physical Security

Exclusion:

Physical security of Microsoft-owned data centers supporting Microsoft 365.

Justification:

These controls are managed by Microsoft as the service provider. CloudNova remains responsible for its identities, configurations, users, access controls, data, and security settings within Microsoft 365.

5.3 Personal Devices Not Used for Business Activities

Exclusion:

Personally owned devices that are not authorized or used to access CloudNova information or systems.

Justification:

Devices that do not access CloudNova information or systems do not materially affect the confidentiality, integrity, or availability of in-scope information. However, any personal device authorized to access CloudNova systems or information is included within applicable security requirements.

5.4 Third-Party Internal Operations Outside CloudNova's Control

Exclusion:

Internal processes, infrastructure, and personnel operations of third-party vendors that do not directly affect CloudNova's information or services.

Justification:

CloudNova cannot directly operate or control a supplier's entire internal environment. However, third-party services and activities that process CloudNova information or materially support in-scope services remain subject to supplier-risk management, contractual requirements, due diligence, and appropriate assurance activities.

6. SCOPE BOUNDARY

The ISMS scope is defined as:

"The information security management system governing CloudNova Technologies' people, processes, technology, cloud infrastructure, SaaS platform, corporate systems, remote workforce, third-party dependencies, and supporting information assets involved in delivering and operating its global customer-facing SaaS services and related business operations, including applicable PCI DSS obligations."

This scope is intended to cover the information-security risks relevant to CloudNova Technologies while clearly defining the boundaries between CloudNova's responsibilities and those of external service providers.
