

Control Effectiveness Report : FinEdge Solutions Pvt. Ltd.

Date: 17 July 2026
Assessor: Aryan Neupane (GRC Analyst)

Executive Summary

As part of the organization's internal security control assessment, five key security controls were evaluated to determine whether they were appropriately designed and operating effectively to mitigate identified information security risks.

The assessment focused on identity and access management, vulnerability management, web application security, third-party risk management, and incident response. Overall, the organization demonstrates a mature security control environment with well-designed controls supporting the protection of customer financial information and business operations.

Of the five controls assessed, two were determined to be **Effective**, while three were **Partially Effective** due to opportunities for operational improvement. No controls were assessed as **Ineffective**.

Overall, the organization's security control framework provides reasonable assurance that key information security risks are being managed effectively.

Controls Assessed

Control ID	Design Effectiveness	Operating Effectiveness	Overall	Notes
C-001	Effective	Effective	Effective	MFA enforced for all privileged and remote users.
C-010	Effective	Partially Effective	Partially Effective	Minor delays observed in patching several non-critical servers.
C-012	Effective	Effective	Effective	WAF policies configured correctly and actively monitored.
C-014	Effective	Partially Effective	Partially Effective	Annual reassessments for several vendors were overdue.
C-017	Effective	Partially Effective	Partially Effective	Incident response tabletop exercise overdue.

Summary of Finding

Effective Controls: 2

Partially Effective Controls: 3

Ineffective Controls: 0

Recommendations

Recommendation 1

Strengthen patch management by implementing automated compliance monitoring and monthly management review of overdue systems.

Owner: IT Operations Manager

Target Date: 15 August 2026

Recommendation 2

Implement a formal schedule with automated reminders for periodic third-party vendor security reassessments.

Owner: Vendor Risk Manager

Target Date: 1 August 2026

Recommendation 3

Conduct annual incident response tabletop exercises and document lessons learned and corrective actions.

Owner: Information Security Manager

Target Date: 31 August 2026

Conclusion

The assessment concluded that FinEdge Solutions Pvt. Ltd. has established a well-designed security control environment that effectively supports the confidentiality, integrity, and availability of organizational information assets. While no ineffective controls were identified, improvements to operational monitoring, vendor governance, and incident response testing will further strengthen the organization's overall cybersecurity posture.
